Carbon

Carbon is a common **non-metal** that can be found in a number of different forms, including diamonds, graphite and charcoal. Different forms of carbon have different properties.

☞ **1** Fill in the missing vowels (a, e, i, o, u) to complete the following passages.

D __ __ m __ nd is the hardest known substance on earth. It is used in dr __ ll bits and s__ w blades because it is so h __ rd. It is also used in j __ w __ ll __ ry because of its sp __ rkl__.

Gr __ ph __ t _ is the most common form of c __ rb __ n. It is a soft bl __ck solid. Graphite is a sp __ c __ __ l n __ n-m __ t __ l because it conducts el __ ctr __ city. It is used in spark-pl __ g leads and in b__ tter __ es.

Ch __ rc __ al is a blackish substance that forms when w __ __ d and other pl __ nt and __ nim _ l matter is b __ rnt. It is used as a fuel s __ __ rce, most commonly in c__ __ king. It can also be used in f __ lt __ rs. Charcoal t __ blets are used to tr __ __ t st __ m __ ch problems.

2 Draw a line to match each form of carbon to its uses.

Form of carbon	**Use**
graphite	fuel source and filters
diamond	drill bits and saw blades
charcoal	batteries and spark-plug leads

3 Rosie conducted an experiment to find out which items contain carbon. Using metal tongs, she burnt different substances over a Bunsen burner. If the substance burnt and turned black, Rosie concluded that it contained carbon. Predict which of the substances below contain carbon. (Hint: Think about where each substance came from.)

Substance	woollen cloth	sugar cube	aluminium foil	bread	steel wool	glass
Contains carbon
