Mixtures and pure substances

☞ **1** Rewrite the words in the passage that have been spelt incorrectly.

A pur (_____) substance is a substance that has not been mixed with anything else. **Elements** can be pure subtances (_____). For example, if you had a jar of oxygen that was not mixed with anything else, you would have pure oxygen.

Compounds can also be pure. Watter (_____) is pure if it doesn't contain anything except water. **Mixtures** contain two or more substances that are mixed up, but not chemicaly (_____) joined. A **substance** is a mixture if it can be separated into other substances. Mixtures can be made up of both eliments (_____) and compounds. Air is a mixure (_____) that contains the elements nitrogen, oxigen (_____) and argon. It also contains the compunds (_____) water and cabon (_____) dioxide.

Unlike for compounds, you cannot write a formula for a mixture.

Air is a mixture of different substances.

2 Draw lines to match the sentence halves below.

A pure substance	both elements and compounds.
Both elements and compounds can	two or more substances not chemically joined together.
A mixture is made up of	is not mixed with anything else.
Air is a mixture made up of	be pure substances.

3 Which of the following substances are pure substances? Circle them, and then underline the mixtures.

gold tap water salt cola

oxygen sugar coffee
