Filters in and around the home

Many different types of filters are used around the home. Some filters remove solids from liquids and gases, and others, such as gas masks, remove gases from the air.

☞ **1** Match the sentence halves below describing filters used around the home.

Gas masks are used to	to keep the ground coffee out of the drink.
Tea bags are an example of a filter – the water filters through the bag,	to remove large mineral deposits and impurities from water.
Air conditioners have filters	collect fluff and hair from clothes.
Water jugs use a charcoal filter	remove poisonous chemicals and bacteria from the air.
Coffee machines use a filter	that remove dust from the air.
Oil filters remove	harmful substances that could damage your car.
Clothes dryers have lint filters, which	releasing the tea but keeping the ground tea leaves from ending up in the water.

2 For each of the filters described above, identify the **residue** and the **filtrate**. The first one has been done for you.

Filter	Residue	Filtrate
gas masks	poisonous gases and chemicals	clean air
tea bags		
air conditioners		
water jugs		
coffee machines		
oil filters		
clothes dryers
