Quarantine laws

Australia has very strict laws about what you can bring into the country. These laws are to protect our native plants and animals and to keep our crops and farm animals disease-free. Every entry point into Australia, for both people and cargo, has Australian Quarantine and Inspection Service (AQIS) inspectors and sniffer dogs. Their job is to make sure that no foreign species are introduced into Australia.

☞ **1** Circle 'true' or 'false' for each of the following statements.

Many Australian native animals and plants have little defence against infections.	True	False
Some living things have crossed seas and oceans and reached other countries in the past.	True	False
All of our native animals could survive attack by predators.	True	False
Animals that have been imported in the past, such as cats and foxes, have done no harm.	True	False
Every Australian citizen should respect quarantine laws.	True	False
There are no diseases found in crops and farm animals that we do not already have in Australia.	True	False
On other continents, almost all marsupials and all monotremes have died out.	True	False
A wooden toy or a salami could never cause serious problems by bringing in insect eggs or worms.	True	False
People who try to avoid quarantine are criminals who may cause death to native plants or animals, or to an important crop or herd.	True	False

2 Write a paragraph describing your opinion about one of the statements above.
