# Working together in Antarctica

Antarctica is a frozen continent that surrounds the South Pole. It is too cold for anyone to live there permanently, but it is a unique environment that fascinates many people. It has been a place of **international cooperation** for more than 60 years, with people from all over the world working together and sharing their resources and research.

☞ **1** The following fictional story parts are out of order. Number the order they should appear in for the story to make sense.

___ Four scientists were collecting ice samples on an expedition to find out more about climate change.

___ The Italians arranged for an aircraft to be put on standby at USA's McMurdo base.

___ The scientists were Linda, an Australian, Georges, a Frenchman, Luigi, an Italian, and Julio, an American.

___ He had a broken leg and his hand was crushed.

___ So, Linda contacted the Italian base by radio.

___ The scientists managed to hoist Luigi to the surface.

___ One day Dr Luigi Volta crashed into a crevasse on his snow mobile.

___ But foggy weather made that unavailable.

___ From there he was flown to Hobart, where microsurgeons repaired his hand.

___ They were working 80 km inland from Italy's Marco Zucchelli scientific base in Terra Nova Bay.

___ His leg was set and he went from Casey to France's Dumont D'Urville base by small aircraft for more treatment.

___ Instead, a helicopter picked up Luigi and flew him to Australia's Casey base for treatment.

**2** Describe in your own words how scientists can help each other in Antarctica.
