Question grid

	Question	Answer
1.	What **S** can cause water pollution?	sewage
2.	What **FS** is having enough food to feed a population?	food security
3.	The rate of animal growth can be increased by using foods rich in which **P**?	protein
4.	What **Q** is a method that can be used to conserve fish stocks?	quotas
5.	What **B** is reduced by pollution and destroying habitats?	biodiversity
6.	What **SC**s are animals that eat hebivores?	secondary carnivores
7.	What **B**s are a source of peat?	bogs
8.	What **F** is Fusarium a type of?	fungus
9.	What **M** is a protein rich food produced from fungi?	mycoprotein
10.	Which **H** are primary consumers that eat producers?	herbivores
11.	What **D** break down dead plant and animal material?	decomposers
12.	What **M** is a gas that contributes to global warming?	methane
13.	What **T** are the levels in a pyramid of biomass?	trophic
14.	What **F** released by animals, leads to the loss of biomass from a food chain?	faeces
15.	What **A** is a carnivore that has no predators?	apex
16.	What **GR** is an example of a genetically modified crop?	golden rice
17.	What **Q** is a human activity that reduces land available to other species?	quarrying
18.	What **I** is a hormone that can be produced by genetically modified bacteria?	insulin
19.	What **E** of food production can be improved by reducing energy transfer between animal and their surroundings?	efficiency
20.	What **P** is a process that takes in carbon dioxide and releases oxygen?	photosynthesis

Teaching notes

Students could be given the game to play in small teams with one of them as the question master. Each team will need 10 coloured counters or hexagons to place on the grid when they get a question right.

The object of the game is to complete a path across the board. One team should make a path from left to right and the other teams should go from top to bottom. The original TV game pitted one contestant (on the shorter path (top to bottom)) against a pair (going left to right).

Teams take it in turns to choose a hexagon. If they get the question correct they place a coloured counter over the hexagon. The team that wins is the one that makes a complete path from one side to the other.

The grid can be used on an interactive whiteboard. Click and drag the coloured counters to cover the appropriate hexagon when a question is answered correctly.
