Cut out the statements and sort them into the correct positions in the Venn diagram.

They fill their container completely.	Mercury, water and milk at room temperature.	When cooled, particles vibrate less and take up less room.
They contract when cooled.	Particles are very far apart.	Particles are randomly arranged.
Particles are close together.	Particles can move around each other.	Particles move very fast in all directions.
Particles vibrate and are arranged in a regular pattern.	They can flow.	They expand when heated.
Strong forces called ‘bonds’ hold particles close together.	Particles can diffuse.	Cannot be compressed.

Gases

Answers

Solids	When cooled, particles vibrate less and take up less room.	Strong forces called ‘bonds’ hold particles close together.	Particles vibrate and are arranged in a regular pattern.
Liquids	Mercury, water and milk at room temperature.	Particles can move around each other.	
Gases	They fill their container completely.	Particles are very far apart.	Particles move very fast in all directions.
Solids and liquids	Particles are close together.	Cannot be compressed.	
Liquids and gases	They can flow.	Particles can diffuse.	Particles are randomly arranged.
Gases and solids			
Solids, liquids and gases	They expand when heated.	They contract when cooled.
