Cut out the definitions and match them to the appropriate keywords.

Keyword	Definition
biodiversity	an organism which consumes plants and animals
carnivore	an organism which consumes plants
chloroplasts	a plant at the start of a food chain
decomposition	an organism which consumes animals
food chain	the part of the plant cell where photosynthesis takes place
food web	the order in which energy is passed from a producer to consumers as food
habitat	an animal which hunts and eats other animals
herbivore	the number and variety of all living things
nutrients	a group of related organisms which are capable of breeding to produce fertile offspring
predator	food chains joined together to show the complex feeding relationships in a habitat
pyramid of numbers	an organism which consumes organisms from the second trophic level of a food chain
omnivore	an organism which consumes organisms from the first trophic level of a food chain
photosynthesis	use of the Sun’s energy to make glucose in green plant cells
producer	chemicals needed for living things to grow
primary consumer	an organism which consumes organisms from the third trophic level of a food chain

© www.teachitscience.co.uk 2012

secondary consumer	breakdown of organic material by bacteria and fungi
species	a diagram to show the numbers of organisms at each stage of a food chain
tertiary consumer	the area where an organism lives, including biotic and abiotic factors
