adaptations			
aerobic conditions			
air pollution			
anaerobic conditions			
Artic conditions			
behaviour			
cactus			
camouflage			
choice chamber			
concentration of dissolved oxygen			
competition			
consumers			
deforestation			
desert conditions			
distribution of species			
ecosystems			
environmental changes			
extremophiles			
habitat			
high salt levels			
high temperatures			
insulating layer			
lichens			
microorganisms			
nutrients			
photosynthesis			
pollinating insects			
pollution indicators			
population			
predation			
sulfur dioxide			
surface area			
tolerance			
warning colours			
water pollution			
water-storage tissues			

Teaching notes

This learning grid could be used in a variety of ways.

1. Students will need a die. They roll the die twice to obtain a pair of numbered coordinates. This will identify a cell on the learning grid. They need to write down the word or phrase from that cell. Repeat three or four times to provide the student with a collection of keywords. The student should then include all the keywords in a sentence or piece of extended writing.

2. Ask students to write a piece of extended writing using a minimum of twelve keywords from the learning grid. The teacher or the students could choose the keywords.

3. Use the grid as the basis for a bingo game in class. The student highlights six words and/or phrases and 'crosses' these off as the teacher gives the definition of the word and/or phrase. An alternative could be to ask students for the definitions.

4. Students could play battleships in pairs against each other. Both students 'hide' five submarines – each occupies a single cell on the learning grid. The first student challenges the second student with a coordinate to identify a cell but must also give a definition of the word and/or phrase in the cell.

5. Ask the class to provide a definition for each cell in the learning grid. Students add them to a blank version of the learning grid. Students could cut the definitions grid up and swap their pile of definitions with a neighbour who then places them onto the keyword grid.

6. Provide each student with a copy of the revision checklist and ask them to tick the 36 cells based on their comprehension of the words and phrases. A 'happy face' would indicate full comprehension. The sad face would indicate a lack of knowledge and the neutral face of some understanding but requiring additional work.
