Teaching notes

This resource is designed to help pupils learn to answer extended response questions effectively.

Students have the word list in front of them plus various coloured pencils.

Use the PPT to reveal the three clues one at a time. After each clue is revealed, students decide which words to 'save or scrap', before showing the next clue. Then show students the exam question.

They are then asked to underline certain words using different colours. At this point go over some of their ideas to iron out any misconceptions such as bile breaking down fat *molecules*.

When this is done students use prompts to help them plan an answer the question. A simple mark scheme is revealed and students write an answer to the question.

As an alternative to using the PPT the clues, instructions and mark scheme could be printed on paper and handed out to the students at the appropriate time.

----------✂----------

Clue 1

The question is about living things.

----------✂----------

Clue 2

The question concerns a process carried out by humans and other animals.

----------✂----------

Clue 3

The process is digestion.

----------✂----------

The question

'*Describe how different parts of the digestive system help break down dietary fats so they can be absorbed.*'

Instructions

- Underline the substances involved in the digestion of fats in blue
- Underline the places where these substances are produced in green
- Underline the products of fat digestion in red
- Highlight where these products are absorbed in yellow
- Circle words which are connected to the effect of bile on fats
- Add an 'F' to words which are connected to another function of bile

Planning your answer

Now you are ready to plan your answer the question

Use the prompts below to help you....

- substances involved in fat digestion
- their function
- where they are produced
- the products
- where the products are absorbed

Are there any other words remaining in your 'save or scrap' list which are relevant? Plan how you will use these.

Writing your answer

Use the mark scheme to help you write an answer to the question.

Mark scheme

Level 1
1 – 2 marks: The answer includes one of the prompts i.e. one substance OR it's function OR where produced OR the products OR the site of absorption.

Level 2
3 – 4 marks: A simple description naming the enzyme OR bile and including its function and at least one other prompt i.e. where produced; the products; where absorbed

Level 3
5 – 6 marks: A detailed description which includes the enzyme AND bile AND all of the prompts OR three prompts AND a description of mechanical digestion.

Keywords

protease	neutralise	liver	stratigraphy	nuclear radiation
pollination	glycerol	kidney	respiration	pollination
enzyme	stomach	droplets	reproduction	mitochondria
bile	carbohydrates	igneous	amino acids	small intestine
excretion	plants	amylase	absorption	mechanical digestion
growth	movement	emulsify	glucose	increased surface area
fatty acids	mouth	colon	pancreas	stomach acid
lipase	alkaline	fungi	hormone	sulphuric acid
habitat	peristalsis	neurone	deposition	small molecules
