Task

Complete the last column using T/F to indicate whether the statement is true or false.
Use the space below each **false** statement to rewrite it.

Statement	T/F?
1. A molecule is a small group of atoms joined together.	
2. Compounds are different types of atoms joined together.	
3. Neutrons have a negative charge.	
4. Compounds do not usually behave like the elements they contain.	
5. In symbols representing elements, the second letter is always a capital letter.	
6. In pure substances the atoms are all the same type.	
7. The periodic table is a list of all known compounds.	

8. Iron, potassium and calcium are metal elements.	
9. Electrons are found in the nucleus of an atom.	
10. Atoms are made of protons, neutrons and electrons.	
11. Most of the mass in an atom is in its electrons.	
12. The centre of an atom is called the neutron.	
13. Sodium chloride is a common element.	
14. Protons are so small that chemists say they have no mass.	
15. An atom is the smallest part of an element that can exist and still behave like the element.	

Answers

Statement	T/F?
1. A molecule is a small group of atoms joined together.	T
2. Compounds are different types of atoms joined together.	T
3. Neutrons have a negative charge. *Neutrons have no charge.*	F
4. Compounds do not usually behave like the elements they contain.	T
5. In symbols representing elements, the second letter is always a capital letter. *In symbols representing elements, the second letter is always a small letter.*	F
6. In pure substances the atoms are all the same type. *In pure substances the particles, which can be atoms or molecules, are all the same type.*	F
7. The periodic table is a list of all known compounds. *The periodic table is a list of all known elements.*	F
8. Iron, potassium and calcium are metal elements.	T
9. Electrons are found in the nucleus of an atom. *Electrons are found in the shells of an atom. / Electrons orbit the nucleus of an atom.*	F
10. Atoms are made of protons, neutrons and electrons.	T
11. Most of the mass in an atom is in its electrons. *Most of the mass in an atom is in its nucleus, which is made up of protons and neutrons.*	F
12. The centre of an atom is called the neutron. *The centre of an atom is called the nucleus.*	F
13. Sodium chloride is a common element. *Sodium chloride is a common compound.*	F
14. Protons are so small that chemists say they have no mass. *Protons are small and chemists say they have a relative mass of 1.*	F

15. An atom is the smallest part of an element that can exist and still behave like the element.	**T**
