The part of the eye that light passes through.	The screen at the back of the eye where the image forms.
The part of the eye which focuses the rays of light onto the retina.	This is the coloured part of the eye.
This is the part of a simple camera which lets the light through.	This carries impulses to your brain.
The opening through which light enters a camera.	Light enters the eye through this structure.
An area of the retina which has no light-detecting cells.	It appears upside down on the retina or screen.

optic nerve	retina
lens	iris
aperture	image
pinhole	pupil
blind spot	cornea

Teaching notes

This resource can be used in a variety of ways:

- There is a PowerPoint presentation that can be used as a quick starter quiz or for revision of the eye and camera.
- The sheet can be used to accompany the quiz: students can be given a copy of the keywords which they hold up as the questions appear.
- The sheet can be used as a straightforward matching activity, where students cut and paste the correct description with each keyword.
