Read each of the statements in the table below.

Decide whether each is true or false and write your answer in the second column.

If the statement is false, add a correct version in the final column.

Statement	True or false?	Correct statement
1. Movement, growth and reproduction are the three life processes.		
2. The lungs are specialised organs where gaseous exchange takes place.		
3. Oxygen diffuses from the lungs into the blood and is picked up by white blood cells.		
4. When we inhale, the diaphragm expands and lifts to increase the volume of the chest.		
5. Respiration is a chemical reaction occurring in plant and animal cells.		
6. Energy is used during work, rest and active sport.		
7. Carbon dioxide is transported to the kidneys to be secreted.		
8. Glucose is an energy resource for all cells.		
9. Respiration and breathing are the same thing.		
10. The blood transports substances to and from the cells of the body.		
11. Inhaled air has more carbon dioxide in it than exhaled air.

12. Oxygen is needed for respiration to make energy for the cell.		

Suggested answers

Statement	True or false?	Correct statement
1. Movement, growth and reproduction are the three life processes.	False	Movement, respiration, sensitivity, growth, reproduction, excretion, nutrition are the **seven** life processes.
2. The lungs are specialised organs where gaseous exchange takes place.	True	
3. Oxygen diffuses from the lungs into the blood and is picked up by white blood cells.	False	Oxygen diffuses from the lungs into the blood and is picked up by **red blood cells**.
4. When we inhale, the diaphragm expands and lifts to increase the volume of the chest.	False	When we inhale, the diaphragm **contracts** and moves **downward** to increase the volume of the chest.
5. Respiration is a chemical reaction occurring in plant and animal cells.	True	
6. Energy is used during work, rest and active sport.	True	
7. Carbon dioxide is transported to the kidneys to be secreted.	False	Carbon dioxide is transported to the **lungs** to be **excreted**.
8. Glucose is an energy resource for all cells.	True	
9. Respiration and breathing are same thing.	False	Respiration is a chemical reaction for releasing energy, whereas breathing is a physical process for taking air into the lungs.
10. The blood transports substances to and from the cells of the body.	True	
11. Inhaled air has more carbon dioxide in it than exhaled air.	False	Inhaled air has less carbon dioxide in it than exhaled air.

12. Oxygen is needed for respiration to make energy for the cell.	False	Oxygen is needed for respiration to ***release*** energy from food for the cell.
