Speed of sound and speed of light

It takes 3 seconds for sound to travel 1 kilometre. The next time a thunderstorm comes your way, look out your bedroom window and watch for lightning. When you see a lightning flash, count the number of seconds until you hear thunder.

Your task:

Find a partner to stand at one goal post with a lump of wood.

One person stands at the other end of the oval at the goal post with a stop watch and table to record results in.

Signal to your partner to hit the pole with the wood.

Start your stopwatch when you see them hit it.

Stop your stopwatch when you hear the noise.

Record this in your table.

Do 3 trials.

	Time it takes to see and hear the wood hit the footy post (seconds)			
Hitting wood	Trial 1	Trial 2	Trial 3	Average
