The Nervous System

The communication system which controls all parts of your body

The Human Nervous System

The human nervous system has two main parts:

- The central nervous system
- The peripheral nervous system

Label these on the diagram.

The central nervous system (CNS)

_____

The peripheral nervous system

_____

_____

The CNS receives information from

_____

_____

Nerve Cells

The nervous system is

_____

Neurones carry

_____

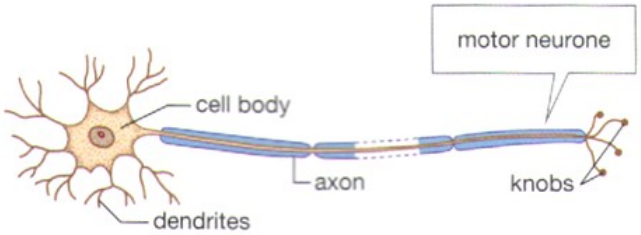

Motor Neurones

Motor neurones carry

_____

_____

_____

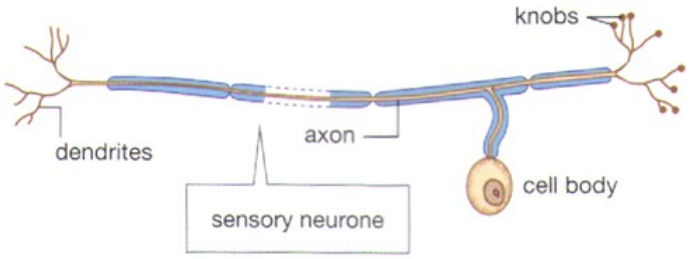

Sensory Neurones

Sensory neurones carry -

_____

_____

Parts of a Nerve Cell

The **cell body**

_____

_____

The **dendrites**

_____

_____

The **axon**

_____

_____

The **knobs**

_____

_____

Sending Messages

The messages sent

_____

_____

Your body needs to

_____

_____

If all the neurones in your body touched one another, stimulating one nerve ending would be like turning on one switch in your house and having all the lights and appliances turn on at once.

When the electrical impulse reaches the knobs, a chemical called a _____ is released into the space between the neurones.

This space

_____

The neurotransmitter carries the message

_____

_____

Nerves

In your body, -

_____

The neurones are

_____

The myelin sheath

_____
