ENERGY: WHAT DO YOU REMEMBER?

1.

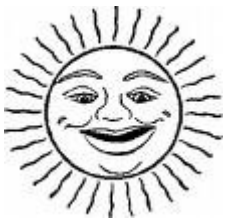

WORD	USE AN ARROW TO JOIN THE CORRECT WORD TO THE CORRECT MEANING	MEANING
SCIENCE		THE ability to do work
Physics		Anything has mass and takes up space.
CHEMISTRY		How much matter an object has. Measured in grams and kilograms
BIOLOGY		The study of living things
MASS		The study of energy
MATTER		The study of matter
ENERGY		The study of everything in the universe in attempt to find information, explanations and predictions about the universe

2. In this term we will be studying Physics. The study of E_____.
3. Energy is the ability to do _____.
4. Onto this sheet write down as many types of energy as you can think of. E.g. heat.

5. What kinds of energy can you see below? **Write** it besides the picture. Use the words: wind, light, sound, solar, heat, wave and electric. You can use some twice(or 3 times).

Energy can be divided into two groups:

Kinetic energy and potential energy.

Potential energy is **stored** energy.
The person on this diving board has stored up energy(potential). As they climbed up above the pool they stored up energy.

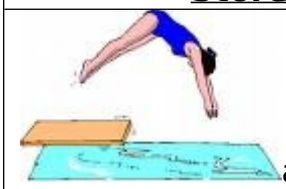

Kinetic energy is energy of **movement**.
The person falling from the diving board is moving so has kinetic energy

6. Classify the following as potential or kinetic energy.

Situation	Kinetic or potential

 a diver before they jump. **Stored** energy	
 a diver jumping and **moving** downwards to the pool.	
 Food has energy **stored** in the chemicals that makes up the food.	
 **falling** rain	
 **moving** bike	
 The suns light hitting your skin. The light energy is **moving** from the sun to you	
 energy **stored** in a battery
