NAME:_____

Light Revision

1. What is regular reflection? Give two objects that reflect light regularly.

2. What is irregular reflection? Give two objects that reflect light irregularly.

3. What is the difference between transparent, translucent and opaque objects?

4. A light ray is shone on a plane mirror at a 45˚ angle. Draw a labelled diagram to show what happens.

5. Draw diagrams to show what happens when parallel light rays are shone onto
    a. A concave mirror
    b. A convex mirror

6. What causes refraction of light?

7. Is a ray of light passing from glass to air bent towards the normal or away from it? Explain your answer using a diagram.

8. Using diagrams, show what happens to parallel rays of light after they are refracted by
    a. A convex lens
    b. A concave lens

9. Complete the following ray diagrams for a concave mirror and a convex lens. Describe the images formed.
