Life cycle of stars

Life Cycle of a Star
clouds of dust & gas
Stellar Nebula
Average Star
H→He
heat & light ejected→star
Massive Star
Red Giant
H runs out→swells
red = cooler
Red Supergiant
Layers of dust & gas are ejected
Planetary Nebula
cools and contracts
White Dwarf
explode→ supernova
Supernova
dense core = neutron star
Neutron Star
or black hole (crushes atoms!)
Black Hole
