1. Conduction is when heat moves through a _____.
2. Heat that moves through a liquid or gas is called _____.
3. _____ travels through space and can go through clear objects like glass and water.
4. A material that does not let heat travel through it easily is called an _____.
5. When a material gets hot its atoms start to move a lot _____.
6. If a solid, liquid or gas is heated up then the atoms also move further apart and the material gets _____.
7. Black cars get a lot hotter than white cars because they _____ more heat from the sun.
8. Survival blankets are usually made of aluminium foil as the foil _____ heat back to the person it is covering.
9. A device that measures temperature is called a _____.
10. A kettle is a device that converts electrical energy into _____ energy.
11. A device that uses sunlight to heat up water is called a _____ hot water heater.
12. Hot air _____ because it is lighter than cold air.
13. If you left a plastic and metal spoon in hot water the _____ spoon would feel hot first because it is a _____ conductor.
14. Energy contained in _____ is used by our bodies to move, grow and keep warm.

15. Conduction is when heat moves through a _____.
16. Heat that moves through a liquid or gas is called _____.
17. _____ travels through space and can go through clear objects like glass and water.
18. A material that does not let heat travel through it easily is called an _____.
19. When a material gets hot its atoms start to move a lot _____.
20. If a solid, liquid or gas is heated up then the atoms also move further apart and the material gets _____.
21. Black cars get a lot hotter than white cars because they _____ more heat from the sun.
22. Survival blankets are usually made of aluminium foil as the foil _____ heat back to the person it is covering.
23. A device that measures temperature is called a _____.
24. A kettle is a device that converts electrical energy into _____ energy.
25. A device that uses sunlight to heat up water is called a _____ hot water heater.
26. Hot air _____ because it is lighter than cold air.
27. If you left a plastic and metal spoon in hot water the _____ spoon would feel hot first because it is a _____ conductor.
28. Energy contained in _____ is used by our bodies to move, grow and keep warm.
