Electricity Quiz

Click on the radio button in front of the correct answers to the questions.

Top of Form

1. Two particles with the same charge will repel or drive away from each other.

○ True ○ False

2. Two particles with opposite charges will be attracted to each other.

○ True ○ False

3. Materials that allow electricity to flow through them easily such as copper are called

○ insulators ○ semiconductors ○ conductors

4. Materials that don't allow electricity to flow throught them easily are called

○ insulators ○ conductors ○ semiconductors

5. These materials conduct electricity under certain circumstances

○ insulators ○ conductors ○ semiconductors

6.This is the study of charges, or charged objects that do not involve moving charges or current.

○ electrostatics ○ electrodynamics ○ gravity

7. This the study of charges in motion.

○ electrostatics ○ electrodynamics ○ gravity

8. When one has connected a conductor, a source of electricity such as a battery and an appliance such as a bulb, one has created an electric

○ insulator ○ circuit ○ switch

9. The positive terminals or ends of the batteries and appliances are wired together and the negative ends of batteries and appliances are wired together in this kind of circuit

○ short ○ series ○ parallel

10. In this kind of circuit the positive terminals and the negative terminals of betteries and appliances are wired together.

○ short ○ series ○ parallel

11. This is the measure of electric current.

○ ohm ◉ ampere ○ volt ○ coulomb

12. This measures electromotive force.

○ ohm ○ ampere ○ volt ○ coulomb

13. This measures resistance to the flow of electricity.

○ ohm ○ ampere ○ volt ○ coulomb

14. This is a measure of charge.

○ ohm ○ ampere ○ volt ○ coulomb

15. This device is used to open and close a circuit.

○ battery ○ bulb ○ switch
