Electricity Revision Sheet

1. Draw a helium atom and label all the parts with their names and charges.

2. Explain how static electricity is made? (Use the words “rub”, “electrons”, “atoms”, “positive”, “negative”)

3. Name the three basic parts of an atom state their charge.

4. Explain the ways in which objects can become charged? What is happening to the atoms of the object?

5. What is the difference between voltage and current?

6. What are each measured in?

7. What does a voltmeter do?

8. Why does hair stand up on end and separate out when a person is “charged up” with a Van de Graf Generator?

9. Draw symbols for the following circuit parts:

   a. Cell

   b. Battery

   c. Light Globe

   d. Wire

   e. Switch

   f. Resistor (fixed)

10. Draw both types of circuits and give advantages and disadvantages for each one:

   a. Series circuit

Advantages	
Disadvantages	

b. Parallel Circuit

Advantages	
Disadvantages	

11. How do these electrical safety devices work?

a. Fuse

b. Earth Pin (in a three pin plug)

c. Plastic insulation around a wire

12. Write 3 sensible electrical safety rules that would apply to around the home.

13. Give definitions for the following electrical words and state what units we use to measure them with:

a. Voltage:

b. Current:

c. Resistance:
