Acid Word Equations Sheet

Consider the following three types of acid reactions we have looked at recently:

1. Acid + Hydroxide → Salt + Water
eg. Hydrochloric acid + Sodium hydroxide → Sodium chloride + water

2. Acid + Oxide → Salt + Water
eg. Nitric acid + Sodium oxide → Sodium nitrate + water

3. Acid + Carbonate → Salt + Carbon dioxide + Water
eg. Hydrochloric acid + Calcium carbonate → Calcium chloride + Carbon dioxide + Water

4. Acid + Hydrogencarbonate → Salt + Carbon dioxide + Water
eg. Hydrochloric acid + Calcium carbonate → Calcium chloride + Carbon dioxide + Water

5. Acid + Metal → Salt + Hydrogen gas

Complete the word equations for each of the following chemical reactions, and then write the formula equations below:

1. Nitric acid + Potassium hydroxide →

2. Sulphuric acid + Sodium carbonate →

3. Sulphuric acid + Calcium carbonate →

4. Hydrochloric acid + Zinc metal →

5. Calcium oxide + Hydrochloric acid →

6. Magnesium hydrogencarbonate + Nitric acid →

7. Phosphoric acid + Magnesium carbonate →

8. Sulphuric acid + Aluminium metal →

9. Hydrochloric acid + Magnesium hydroxide →

10. Nitric acid + Copper hyrdogencarbonate →

11. Sulphuric acid + Potassium hydrogencarbonate →

12. Hydrochloric acid + Nickel metal →

13. Hydrochloric acid + Sodium oxide →

14. Sulphuric acid + Calcium metal →

15. Nitric acid + Aluminium oxide →

16. Phosphoric acid + Aluminium hydroxide →

17. Hydrochloric acid + Zinc hydroxide →

18. Hydrochloric acid + Copper carbonate →

19. Barium oxide + Sulphuric acid →

20. Barium hydrogencarbonate + Phosphoric acid →
