POWER

POWER (Watt) = Work Done (Joules) / Time Taken (Seconds)	1 Watt = 1 Joule per sec

a) A boy does 500J of work in 10 seconds. What is his power output?

b) A girl uses 1KJ of energy in 50 seconds playing tennis. What is her power output?

c) An athlete runs a 100m race in 10s against a drag of 100N. What is their power output?

d) A boy weighing 550N runs up the stairs,
i) in 3 seconds, and then
ii) in 4 seconds
The vertical height of the stairs is 4m. What is the power output in each case?

e) A lift containing 5 people lifts to a height of 20m in 10s. The total weight of the lift and passengers in 550Kg. What is the power of the lift motor in Watts?
