NEWTON'S THIRD LAW OF MOTION

Using the information provided, complete the following questions.

1. Define Newton's Third Law of Motion: _____

_____

2. List three pairs of 'action' and 'reaction' forces. Be sure to state what each force is acting on.

_____

_____

_____

3. When you walk forwards, what provides the forward push? _____

4. A yacht uses the push of the air on its sails to propel it forwards. If the push of the air on the sails is an 'action', what is the corresponding 'reaction'?

_____

5. What 'reaction' force propels a paddle boat forward? State clearly the 'action' force that makes up the other part of the action-reaction pair.

_____

6. When swimming you push the water backwards.
If this is the action force then what is the reaction force? _____

7. Using the terms action and reaction forces, explain:
   a. the recoil of a gun when it is fired _____
   b. the action of striking a tennis ball with a racquet _____

8. A sailor jumps from a dingy to the jetty. Use the terms action and reaction forces to explain what happens to the dinghy.

_____

_____

9. How is the bouncing of a basketball an example of Newton's third law?

_____

_____

_____
