Name : _____

Nitrogen in the Ecosystem

Pearson Science 10 pg 178 – 180

The symbol for nitrogen is _____.

The air is _____% nitrogen. It is in the form of _____ ____ ( ).

The problem with the nitrogen gas found in the air is that _____

_____

_____

Plants get their nitrogen from the _____ in the form of _____ ( ) or _____ ( ).

Animals get their nitrogen from _____

_____

_____

There are different groups of bacteria that are able to _____ nitrogen from one form to another.

One group found in soil are decomposers which _____ _____. They convert the nitrogen found in their bodies into _____ ( ). Another group use the _____ as a form of _____ and convert it into _____ in the process.

Plants can then use these forms of nitrogen by taking them up through their _____.

A third group of bacteria are called _____ _____ _____. They can change the nitrogen found in the air pockets in the _____ into a form that can be used by _____. They 'fix' unusable nitrogen gas to make it useable.

_____ -> _____ -> _____

_____ bacteria do the opposite. They get their _____ from _____ and convert it back into _____ which is released into the _____.

_____ can also convert _____ nitrogen into useful forms. The energy joins nitrogen with _____ to form _____ _____. These _____ in _____ and soak into the ground where they can be used by _____.
