Metal, Non-metal and Ionic Compounds

Types of chemicals can be classified into one of the three following categories:

- Metals
- Non-metals
- Ionic

Today you are going to look at some of their properties. You will look at their

- Malleability: Can it be hammered into sheets or is it brittle?
- Ductility: Can you form it into a wire?
- Lustre: Is it shiny or dull?
- Melting point: Is it high or low?
- Thermal conductivity: Does it conduct heat?
- Electrical conductivity: Does it conduct electricity?

	Metal	Non-metal	Ionic
Electrical conductivity			
Thermal conductivity			
Malleable			
Ductile			
Lustre			
Melting point			
Examples			

Look at the samples around the room and complete as much of the table as you can.
