Experiment – Stationery Coins

Diagram:

Now answer these questions

1. What happened to the coin?

_____

_____

_____

_____

_____

2. We can say the coin did not move with the paper because it had _____.
3. State one of Newton's laws of motion that fits with this experiment:

_____

_

_____

_

4. Watch the clip of the tablecloth. Describe what happens using science ideas

_____

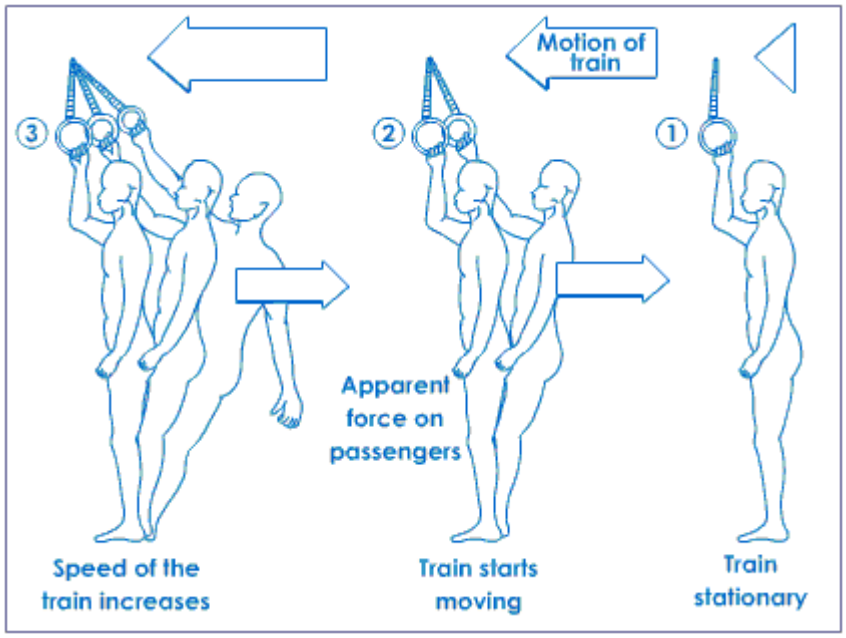

_____

_____

_____

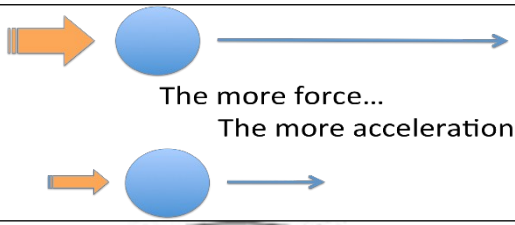

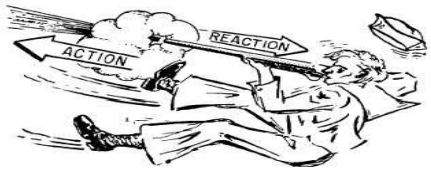

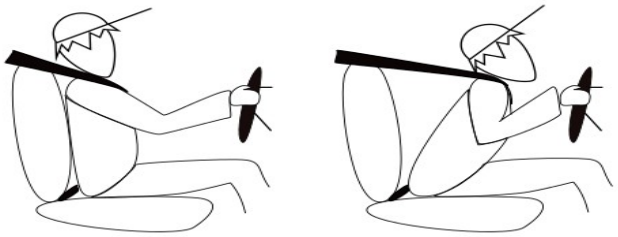

_____

5. In the picture below what is behaving similar to the coin in your experiment?
   This diagram show the movement of person on a train.

Newton's Laws of Motion	Definition
1st	An object at rest will remain at rest unless acted on by a f_____. An object that is moving will continue to _____ with the same speed and in the same direction unless acted upon by a force. This law is often called "the law of i_____".
2nd	An object will accelerate in the _____ of an unbalanced force acting upon it. The amount of acceleration depends on the mass of the _____ and the amount of _____ acting on it.
3rd	For every action force there is an opposite and equal _____ force.

Which law of Motion is shown in the picture?	Picture

	 The more force... The more acceleration.
1.	 I'm not going anywhere unless something forces me to! I'll keep going until something stops me.
	 REACTION ACTION
	
1.
