Sherbet Recipe

1 teaspoon Jelly crystals	(Flavour)
2 teaspoons Icing Sugar	(Sweetness)
½ teaspoon Citric Acid	(Acid)
¼ teaspoon Bicarb Soda	(Hydrogen carbonate)

Mix all the ingredients together in a cup or freezer bag.

Your saliva provides a medium for the reaction between the citric acid and bicarb soda.

The reaction that occurs in your mouth is

Acid + Hydrogen Carbonate = Carbon dioxide + Salt + Water

The carbon dioxide bubbles provide the fizz.
