IONS AND THEIR VALENCIES

Just as you memorised a lot of the element symbols, it is a good idea to learn some of the more common valencies.

INSTRUCTIONS: 1. Fold the column underneath the page.
2. Fill in the far column. **right-hand column.**
3. Fold back the answers and correct your work.
4. On a separate sheet, practise the ones you got wong.
5. Repeat steps 1 to 4 above, but fold any filled-in columns underneath with the answers.

ION SYMBOL & VALENCY ANSWERS								
oxide								O^{2-}
chloride								Cl^{-}
iron(III)								Fe^{3+}
sodium								Na^{+}
magnesium								Mg^{2+}
sulfate								SO_4^{2-}
hydrogen								H^{+}
iodide								I^{-}
phosphate								PO_4^{3-}
lead								Pb2+
sulfide								S^{2-}
silver								Ag^{+}
fluoride								F^{-}
calcium								Ca^{2+}
carbonate								CO_3^{2-}
barium								Ba^{2+}
copper(I)								Cu^{+}
hydroxide								OH^{-}
zinc								Zn^{2+}
ammonium								NH_4^{+}
potassium								K^{+}
nitrate								NO_3^{-}
aluminium								Al^{3+}
iron(II)								Fe^{2+}

bromide								Br^-
copper(II)								Cu^{2+}
hydrogen-carbonate								HCO_3^-

****When you can **successfully complete 3 columns one after the other, then you know your valencies*****
