Electricity – how does it work?

1. Electrons have a _____ charge.

2. In metals, the outer electrons are _____ bound which means they are free to move around and _____ _____.

3. Rubbing a plastic rod removes _____ from its surface leaving it _____ charged.

4. Items with the same charge _____ each other, while items with different charges _____ each other.

5. Electrons can be made to move by an _____ _____.

6. An electron flow is _____.

7. A _____ can make electrons move.

8. In a circuit, electrons can _____ to move, but the circuit must be complete.

9. Why do paper tufts stand up when they are charged?

10. What is the difference between static and current electricity?
