Physics

Physics is the study of Energy.

Energy is the ability to do work

Work is when a force moves something.

How We Measure Energy and Work

We measure things using units of measure

Examples

Quantity	Unit of measure
Temperature	°C
Speed	
Length	
Energy	J(joules)
Work	J(joules)

1000 joules=1kj

The energy stored in food is shown in KJ. Here is the wrapper on a bottle of coke.

How much energy is there in this bottle of Coke?
