Acids and Bases

Write the definition of an acid.

Acids share similar chemical properties. Acids:

-
-
-
-

An acid's strength depends on how many hydrogen ions are released into the solution.

- **Strong acids ...**
- **Weak acids ...**

Strong Acids		
Acid	**Formula**	**Used for/Found in**
Hydrochloric		• •
Nitric		•
Sulphuric		• •

Weak Acids		
Acid	**Formula**	**Used for/Found in**
Acetic		•
Ascorbic		•
Carbonic		•
Citric		•
Lactic		• •

Write the definition of a base.

Bases share similar chemical properties. Bases:

-

-
-
-

A base’s strength depends on how many hydroxide ions are released into the solution.

- **Strong bases ...**
- **Weak bases ...**

Strong Bases		
Base	**Formula**	**Used for/Found in**
Calcium hydroxide		• •
Sodium hydroxide		• •

Weak Bases		
Base	**Formula**	**Used for/Found in**
Ammonia		•
Sodium hydrogen carbonate		•
Magnesium hydroxide		•
Sodium carbonate		•

Indicators are

A common indicator is

Universal indicator changes colour depending on the pH of the solution.

Acids: **Neutral**: **Bases**:
