# ECOLOGY

ACROSS

2 the study of how organisms interact with each other and with their environment
5 relationship between organisms that are trying to use the same limited resource
6 all the linked food chains in an ecosystem
9 the process by which plants make their food
13 animals that obtain body heat from outside their body
15 where an organism lives Interdependence/relationship between organisms, where each affects the other's survival
16 a feature that an organism has that enables it to survive
17 a living factor of the environment
19 relationship between two organisms living closely together, where each benefits the other
20 organisms that make food for the community

DOWN

1 species that are critical to the survival of an entire ecosystem
3 all the living organisms in an ecosytem
4 a non-living factor of the environment
7 relationship between two organisms, where one benefits and the other is unharmed
8 animals that can generate body heat internally
10 all the factors in an organism's surroundings that affect it
11 relationship between two organisms, where one organism kills and eats the other
12 relationship between two organisms, where one organism lives on or in the other and feeds off it
14 how well an area supports life
18 organisms that require a ready-made source of food
