Earth & Beyond Revision

1. Name the 9 planets of the solar system in order from the Sun.

2. Arrange them in order from biggest to smallest.

3. Describe one of the planets in detail (temperature, length of day, length of year, atmosphere).

4. Write a brief account of a disaster in space and how you managed to survive after things went wrong.

5. How does the weather affect the way people live (eg. clothes, houses, cyclones, rain, heat)?

6. Why is the sun so important for life on Earth?

7. How do rivers and winds make new rocks from old rocks (Use the words “igneous” and “sedimentary” in your answer)?

8. Why does the weather change every six months (wet season then dry season)?

9. Think of a natural disaster that could happen to you. What things caused it? How would it affect your life? What things could be done to reduce the risks?

10. Why does the camping spot “Minari” have white beach sand and then red pindan only 15 meters up the beach?

11. Why are river beds much rockier at the start of a river and much muddier at the end (near the ocean)?

Good luck in the Test!!
