When converting a word equation to a formula equation.

1. Metals. For metals we just write the symbol on its own.

Name	Symbol
Iron	
Calcium	
Silver	
Lithium	

2. There are some formula that we need to know.

	Name	Formula
The diatomic gasses	Oxygen gas	O_2
	Nitrogen gas	N_2
	Hydrogen gas	H_2
	Chlorine gass	Cl_2
	Carbon dioxide	CO_2
	Water	H_2O
	Carbon	C

3. The acids

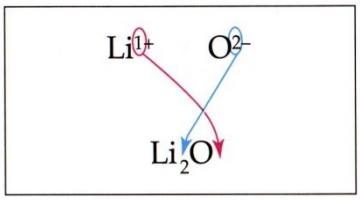
Hydrochloric Acid HCl

Nitric Acid HNO_3

Sulfuric Acid H_2SO_4

Phosphorous Acid H_3PO_3

4. For ionic compound we work out the formula by using the drop and cross method.



Calcium metal + oxygen gas calcium oxide

Hydrogen gas + chlorine gas hydrochloric acid

Iron metal + hydrochloric acid → iron chloride +hydrogen gas

Lead metal + oxygen gas → Lead oxide

Calcium metal + water → calcium hydroxide and hydrogen gas

Chlorine gas + lithium metal → lithium chloride

Silver metal + hydrochloric acid → silver chloride and hydrogen gas

Carbon + lead oxide → carbon dioxide + lead metal
