# Peripheral Nervous System (p228-231)

The PNS has two separate parts: the somatic nervous system and the autonomic nervous system.

## Somatic nervous system

1. What is the function of the somatic nervous system?

2. Sensory organs in the somatic nervous system are **receptors**. Describe what receptors are and what they do.

3. What is a **stimulus**? List some examples of stimuli.

4. There are many types of receptors. Describe what each of the receptors below responds to.
   a. Mechanoreceptors

   b. Photoreceptors

   c. Thermoreceptors

   d. Chemoreceptors

<u>Sensitive skin</u>

1. Name some sensations the skin can respond to.

2. Describe how the skin protects the body from the outside world.

Sense of Hearing

1. What is the ear able to sense?

2. Describe how your ear helps you balance.

Sense of Sight

1. Describe how the eye allows you to see.

2. There are two types of photoreceptors: rods and cones. Describe their function.
   a. Rods

   b. Cones

Sense of smell and taste

1. What are the receptors for taste and how many do you have?

2. Describe how taste receptors are arranged.

**Autonomic nervous system**

1. What activities does the autonomic nervous system?

2. What are the two parts of the autonomic nervous system?

Sympathetic nervous system

1. Describe the function of the sympathetic nervous system.

2. How does the sympathetic nervous system prepare your body for intense activity?

3. List seven things the sympathetic nervous system does.

Parasympathetic nervous system

1. Describe the function of the parasympathetic nervous system.

2. List five things the parasympathetic nervous system does.

-
