Questions

1. What is an electric current?

2. Why will current in an electrical circuit always flow from the negative terminal to the positive terminal of a battery?

3. What is meant by the term ‘complete circuit’?

4. What is the difference between conductors and insulators?

5. Give three examples of conductors.

6. Give three examples of insulators.

7. Explain why metals are good conductors of electricity.

8. Do you think the electrons in an insulator, such as plastic, are free to move or tightly bound? Explain your answer.

9. Why are electrical wires around the home coated in plastic?

10. Silver is a better conductor of electricity than copper, but copper wiring is used in homes and factories. Why do you think this is so?
