ACIDS AND BASES AT WORK – Activities

Name: _____ Date: _____

1. Read the questions below.
2. Now read pages 38-39 of Science Quest 2, with those questions in the back of your mind.
3. Add the term neutralization to you terminology sheet, and write in **your** meaning.
4. Answer these questions.

QUESTIONS

Remember

1. Complete these word equations.

   a) Acid + Base ⟶

   b) Acid + Metal ⟶

2. List three examples of helpful neutralisation reactions.

   _____

   _____

   _____

3. List three examples of acids causing damage.

   _____

   _____

   _____

4. Explain why it is necessary to add ‘chlorine’ (which is actually calcium hypochlorite or a sodium hypochlorite solution) to swimming pool water.

   _____

   _____

5. What is ‘pickling’ and how does it work?

_____

_____

THINK

1. Complete this word equation.

   Acid + Antacid ⟶

2. Why do your eyes sometimes sting in a swimming pool? If they do sting, what needs to be done to the eater in the pool?

   _____

   _____

   _____

3. Why do foods high in sugar cause so much tooth decay?

   _____

   _____

WEEK 9 Thursday P1

Tasks

1. Watch the video on acid rain.

2. Move into your groups and receive your acid rain research question. Your task, as a group, is to find out as much information on the question you have been given. Use your A3 sheet to brainstorm and jot notes onto.

   Gather your information by:

   - Reading the SQ 2 books p40-41
   - Searching any of the books, encyclopedias, articles and the Internet that are available to you.

Note: You will gather more information if you separate to conduct your research, and then meet up again every 5-10 minutes. THIS IS CALLED ‘ORGANISED TEAMWORK’

I will award a prize to the best team at the end of the lesson. Fill those sheets up with as much information as you can as, you will be typing it all up tomorrow in the F5 lab and presenting your research question and answers next Tuesday.

WHAT CAUSES ACID RAIN?

WHERE DO THE GASES, THAT CAUSE ACID RAIN, COME FROM?

WHAT DAMAGE IS CAUSED BY ACID RAIN?

HOW CAN THE PROBLEM OFACID RAIN BE SOLVED?
