Rates of Reaction Worksheet

Complete the sentences below using the words in the “word bank”.

area bonds catalyst catalyst chance changed collide collide collisions concentration concentration frequently kinetic loss pressure product rate smaller solid surface temperature used

1. The rate of reaction means the rate of ---------- of reactant or rate of formation of----------

2. Chemical reactions can only take place when particles ---------- into each other.

3. There are several ways to change the---------- of a reaction

4. Increasing the ---------- increases the ---------- energy of the particles and they ---------- more ---------- and with greater energy.

5 Increasing the ---------- of a reactant in solution increases the---------- of a 'fruitful' collision between particles.

6 For gaseous reactants increasing the---------- increases the rate of reaction and is the same as increasing the ----------

7. A ---------- reactant will react faster if it is broken into ---------- pieces. This increases the---------- and allows more ---------- between the reactants.

8. Adding a---------- can also speed up a reaction because it helps break chemical---------- between atoms. However, although it helps the reaction to go faster, a ---------- is not ---------- at the end of a reaction and could be ---------- again.
