Teacher sheet lesson eight

Introduction

You have learned about diverging and converging plate boundaries. In this lesson you will summarise information about these boundaries and explore a third type, a transform boundary.

What type of plate boundaries do volcanoes form at?

Task 1 — Compare and contrast

Student information:

Complete the table that compares and contrasts different types of plate boundaries. Use the document ‘Comparison table for plate boundaries’ and complete using information and images from the internet and your notes and recordings.

Teacher information:

The table can be found in the following pages of this document.

Task 2 — Movie Maker animations

Student information:

Use movie making software such as Movie Maker to make animations of the three types of plate boundaries compared in the table. The animations need to be labelled and show the landforms and events that result from plate movement. You will need to take still images of diagrams to create this animation. Submit your completed file to your teacher.

Teacher information:

You may need to familiarise the students with the movie making software they will be using.

Comparison table for plate boundaries

	Converging	Diverging	Transform
Insert a picture.			
In which direction are the plates moving?			
What landforms are created?			
What types of events are caused by the movement?			
Where are these boundaries on the planet?			
Insert two photos of these boundaries.			
How is each boundary similar?			
How is each boundary different?
