Mitosis YouTube Video

https://youtu.be/f-ldPgEfAHI Mitosis: The Amazing Cell Process that Uses Division to Multiply! (Updated) (Amoeba Sisters)

1. What is mitosis?

_____

_____ **a type of cell division** _____

(1 mark)

2. Why is it important that your cells undergo mitosis?

_____

_____ **to grow and repair** _____

(1 mark)

3. What is mitosis NOT?

_____

_____ **a process to make sperm and eggs** _____

(1 mark)

4. What are the new cells made by mitosis like? _____ **identical** _____

(1 mark)

5. What would happen if cells just divided all the time?

_____

_____ **rapid growth** _____

(1 mark)

6. What is cancer? _____ **rapid growth of cells**___- _____

(1 mark)

7. What do cells do in interphase? _____ **growth, replication and cell functions** _____

(1 mark)

8. How much time in the cell cycle is mitosis? _____ **10%** _____

(1 mark)

9. What is DNA? _____ **your genetic information** _____

(1 mark)

10. What sort of DNA needs to be in your new cells? _____ **same** _____

(1 mark)

11. What are chromosomes made of? _____ **DNA & protein** _____

(1 mark)

12. How many chromosomes do humans have? _____ **46** _____

(1 mark)

13. What do cells do during interphase? _____ **duplicate DNA** _____

_____ _____

(1 mark)

14. What happens during prophase? _____ **chromosomes are thickening** _____

_____ _____

(1 mark)

15. What happens during metaphase? _____ **chromosomes line up in the middle** _____

_____ _____

(1 mark)

16. What happens during anaphase? _____**Chromosomes move to either end** _____

_____ _____

(1 mark)

17. What happens during telophase? _____ **two new cells appear** _____

_____ _____

(1 mark)

18. Cytokinesis is responsible for _____ **breaking the cytoplasm into two**_____

(1 mark)

19. If we didn't understand mitosis we would not understand how _____ **growth** _____

and _____ **repair** _____ happens.

(2 marks)
