Temperature Control
CLOZE exercise
Me and My Environment
page 42

Our body temperature is maintained at about _____. Much of our body _____ is generated from our _____ as well as the _____ of the body such as the _____, the _____ or the _____. The _____ is _____ by the blood. Then as the _____ comes to the _____ of the _____ the _____ radiates into the _____. Our blood vessels are able to _____ (_____ _____) or _____ (_____ _____).

Read the next three paragraphs. Answer these questions:

1. What are the three ways our bodies lose heat?

a)
b)
c)

2. What are three ways that our body can stay warm?

<u>Body size and heat loss</u>
Small _____ (and indeed any organism) _____ heat more _____ than _____.

To work out the surface area to volume ratio:

<u>Surface area</u> eg <u>200cm</u> = 2:1
volume 100 cm^2

<u>Homeostasis</u>
This refers to the bodies tendency to maintain a constant internal environment, despite external changes.
