Sound Revision

1. Describe how sound is produced. Draw a diagram as part of your answer.

2. Approximately how fast does sound travel in air?

3. Explain why sounds travel faster in solids than it does in air.

4. What is an echo?

5. What conditions do you need for an echo to be formed?

6. Why do you need to be a certain distance away from the reflecting surface to hear an echo?

7. What is the frequency of a wave?

8. What is the wavelength?

9. What is the amplitude?

10. Look at the following wave. What is the frequency and amplitude of the wave?

11. Explain the difference between noise and musical notes.

12. Explain what the term pitch means.

13. Explain what the term loudness means.

14. Explain how pitch and frequency are related.

15. Name the three types of musical instruments.

16. Explain how sound is produced and changed in each type of instrument.

17. Explain how sound can cause hearing loss.
