TYPES OF ADAPTATIONS

Adaptation=any feature that helps an organism _____ or r_____ in its environment.

There are three main types of adaptation.

1. Structural adaptations=a _____ part that helps an organism survive. An example is the echidna. It has s____ that protect it from attack.
2. Behavioural adaptations=any habit, action or way of life that helps an organism survive. Lizards hide under rocks when it is very hot.
3. Functional adaptations=a feature of the way an organisms body _____ that helps it survive. In hot weather elephant's bodies send more blood to their big ears. Heat travelling in the blood is lost through the skin of the ears. This helps the elephant keep cool.
