Using Indicators to find pH

Aim: To use a variety of indicators to find the approximate pH of different liquids.

Equipment: Cavity tile
Range of indicators
Variety of liquids to test
pH meter

Method: 1) Put a small sample of the liquid to be tested in a dimple on the cavity tile.
2) Add a drop of indicator to the sample and record the colour.
3) Repeat for all indicators and liquids, using a new sample for each test.

Results:

Indicator	Colour in Acid	pH Range for Colour Change	Colour in Base

	Indicators and colours produced				
Liquid					

Liquid	Estimated pH	Actual pH
