Average Speed Calculations

Speed=

$$\text{Average speed} = \frac{\text{Distance}}{\text{time}}$$

$$v = \frac{d}{t}$$

Jack rides his bike for 3 hours and travels 75km. What was his average speed?

$$v = \frac{d}{t}$$

$$= \frac{75}{3}$$

$$= 25\text{km/h}$$

Questions

Bob rides his bike for 2 hours and travels 40km. What was his average speed?

2. Jen runs a marathon, a 42km long distance race. It takes her 4 hours. What was her average speed?

3. An aeroplane travels 1000km in 10 hours. What was its average speed?

4. Geoff rides his motorbike from his house to his friend's house. It takes him 2 hours. His friend lives 300km away. The police accuse Geoff of speeding. The speed limit between Geoff's house and his friend's house was 110km/h. Was Geoff speeding?

Converting speed in Km/h to m/s

Draw the diagram from page 251 of the text book to show how this is done.

Speed in Km/h		**Speed in m/s**
360		
		7.2
1800		
		10.8
