Burger Rings and Energy

What are we trying to find out today?= How much **energy** is there in 100g of Burger Rings.

Background information.

Key words

Word	Meaning(definition)
Energy	
Mass	
Temperature	
Volume	

Units of Measure

Energy is measured in _____.

Mass is measured in _____.

Volume is measured in _____.

Temperature is measure in_____.

Just about everything has potential energy stored in it. The problem is releasing that energy to be able to do some work.

Burger rings contain stored chemical energy. When we eat them, the stored energy is converted by our bodies so we can do work. We can also use the energy in a burger ring to heat a container of water.

Read the instruction on the sheet provided.

Using our information.

Raw data table

Test	Initial temperature of water(^{0}C)	Final temperature of water(^{0}C) after burning burger ring	Difference in temperature of water(^{0}C)
1			
2			
3			
Total			
Average Total / 3			

Calculating the amount of energy one burger ring.

It takes 42 joules of energy to raise the temperature of 10 g of water by 10^{O}C.

So, to calculate the energy in your burger ring, multiply the temperature **rise** by 42.

Average temperature rise=_____^{o}C

Energy in one burger ring= _____ X 42=_____j

Answer=
