Summary so far….

Classifying Matter
Match each of the following examples to the relevant diagram:

$HCl + SiO_2$	CaO	$CO_2 + MgO$	$H_2O + F_2$
$FeCl_2$	N_2	Ne	$Ar + O_2$

Periodic Table
Use the substances in the box to answer the following questions:

diamond (C)	P_4	Li	Cl_2	I_2	Ca	K	Ne	Hg	Be

a) Which substances are the best electrical conductors?
b) Which substances are non-metals?
c) Which is the most reactive metal?
d) Which is the lightest Group 1 substance?
e) Which substance produces +2 ions?
f) Which substance has the lowest A?
g) Which substance is unreactive?
h) Which substance is the most abundant in the atmosphere?
i) Which substances are used as disinfectants because of their powerful oxidising strength?
j) Which substances are gases at STP?
k) Which substances have 5 valence electrons?
l) The substances in (a) above can be divided into two groups based on what physical property?

Atomic Structure
a) What is the relationship between the electron configuration of an atom of an element and the position of that element on the Periodic Table?
b) Complete the table:

Symbol	Element	Atomic number	Mass number	No. of protons	No. of neutrons	No. of electrons	Electron configuration
H	hydrogen	1	3	1	2	1	1
O					10	8	
	magnesium				12		
		7	14				
Na			23				
					14	13	
		19	40				
S					16		

				4	5		
			19	9
