INTERPHASE	♦ **DNA duplicates.** ♦ **Organelles duplicate.**	
PROPHASE	♦ **Nuclear membrane breaks down.** ♦ **Chromosomes appear.** ♦ **Spindle apparatus forms.**	
METAPHASE	♦ **Chromosomes line up at equator of cell.** ♦ **Centromeres attach to spindle fibres.**	
ANAPHASE	♦ **Chromosomes split, chromatids move to opposite poles of**	
TELOPHASE	♦ **Spindle apparatus breaks down.** ♦ **Nuclear membranes form.**	
CYTOKINESIS	♦ **Cytoplasm splits betwee both cells.** ♦ **Two daughter cells are formed.**
