Worksheet 8.5

Science Quest 10: pages 313–15

Force and gravity

Answers

Weight

1. The weight of an object is the force acting on the object in a gravitational field. The stronger the gravitational field the greater the weight of a body. Weight is measured in the units of *newtons* (N)

The weight (W) of a body of mass (m) in a gravitational field (g = acceleration due to gravity) is given by the formula:

$$W = mg$$

On the Earth's surface 'g' typically has a value of 9.8 m/s^2 but this value varies with altitude and latitude. On other planets the value of 'g' also changes.

Complete the table using the above formula.

Mass (kg)	Gravity (m/s^2)	Weight (N)
20	9.8	$20 \times 9.8 = 196$
30	$\frac{286.5}{30} = 9.55$	286.5
$\frac{400}{9.8} = 40.8$	9.8	400.0

Spreadsheets and graphing

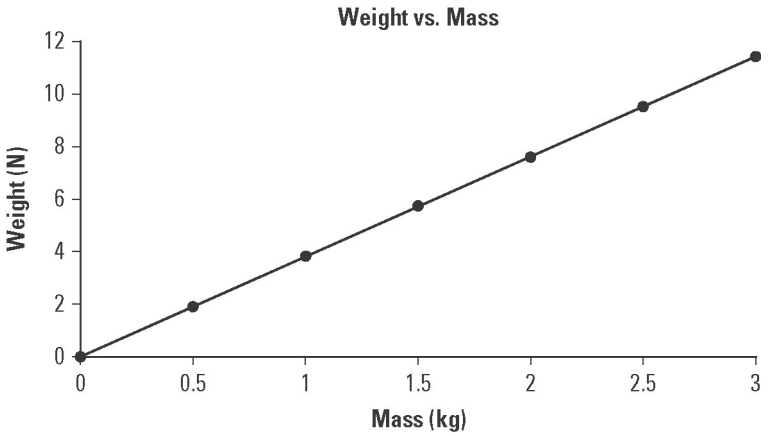

2. A spreadsheet such as Excel is a useful computer application for tabulating data and plotting graphs. In this exercise you will practise using a spreadsheet application.

The following mass and weight data was collected from the planet Mars. The data is presented as you would set it out in the spreadsheet application.

(a) Open the spreadsheet application and enter the data as tabulated below.
(b) Select *Insert*; *Chart* from the menu bar.
(c) Select *Scatter* as the chart type. Select 'Scatter with straight lines and markers'.
(d) The *Design* and *Layout* tabs can be used to insert a chart title and then each axis title and unit.
(e) Select the gridlines you would like to show.

	A	B
1	Mass (kg)	Weight (N)
2	0.0	0.0
3	0.5	1.9
4	1.0	3.8
5	1.5	5.7
6	2.0	7.6
7	2.5	9.5
8	3.0	11.4

Once your chart is complete, print a hard copy. Use this hard copy to answer the following questions.

(f) Estimate the weight of a 1.3 kg body on the surface of Mars. ....4.9 N....

(g) Estimate the mass of an object that weighs 10.0 N on Mars. ....2.6 kg....

(h) Suggest what information the slope of the graph may provide.

(*Clue:* The formula $W = mg$ can be rearranged as $g = \frac{W}{m}$.)

The slope provides the acceleration due to gravity on the planet.
